D3: WO 98/52558 A (BAYER CORPORATION; RANGES, GERALD; SCOTT, WILLIAM; BOMBARA, MICHAEL; R) 26 November 1998 (1998-11-26)		
Documents D1-D3 disclose antiviral agents having a phenylurea moiety. The products of the formula (I) according to the application differ in several ways, for example by the central imidazole ring, which replaces pyrrole and oxazolidine rings. Since all claims have this distinguishing feature, the novelty requirements of PCT Article 33(2) are satisfied.

Box No. V

Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

Products 3a and 3b from document D2 are considered to be the closest prior art owing to their structural closeness to the products (I) according to the application. These products which have been described as antiviral agents differ from the imidazole derivatives, essentially by the central oxazolidine ring. Further differences arise from the "linker" to the piperidine group, which does not have a carbonyl group. The objective technical problem is considered that of providing further antiviral agents. The tested products in table A of the description demonstrate that the problem has been solved. The solution in the form of the distinguishing features mentioned is not considered to be obvious because the prior art does not give any clue to the exchangeability of the central ring system. Neither in D2 nor in the remaining documents cited is such a modification indicated. The present claims therefore appear to involve an inventive step under PCT Article 33(3).

Continuation of: Box VI

The International Patent Application (D4 =
WO 2005/092865 A, BAYER HEALTHCARE AG; ZIMMERMANN,
HOLGER; BRUECKNER, DAVID; HEIMBACH, D, 2005-10-06) was
published between the priority date and filing date of
the present application. The agents described as
antiviral agents, which differ in the substituent NR7R8
from group R1 according to the application, are not
included in the prior art as defined in the PCT.
Consequently no further account has been taken of D4 in
the establishment of this opinion.
